U.S. Patent and Trademark Office PTOL-303 (Rev. 7-05) Continuation of 5. Applicant's reply has overcome the following rejection(s): the rejection of claims 9, 11, 13 under 35 U.S.C. 112, second paragraph; the rejection of claims 6, 7, 10, 11 and 13 under 35 U.S.C. 103 as being unpatentable over Liechty et al., Journal of Nutrition; the rejection of claims 4, 5, 10, 11 and 13 under 35 U.S.C. 102(b) as being anticipated by Liechty et al., Journal of Nutrition; the rejection of claims 9-11 and 13 under 35 U.S.C. 102(b) as being anticipated by The Merck Index.

Continuation of 13. Other: The rejection of record directed to provisional obviousness-type double patenting is maintained. The rejection of claims 6 and 7 under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement because claims 6 and 7 are drawn to functional characteristics, rather than structural characteristics, of the components of the claimed "article of manufacture", is maintained. The specification fails to define the actual compounds contemplated that are "facilitating substances" in the present composition claims. Applicants' argument drawn to the name "facilitating substances" based on functional properties is not persuasive. A definition of a "facilitating substance" based on to what certain compounds in the claimed pharmaceutical composition do, instead of what they actually are, does not enable the skilled practitioner to prepare an article of manufacture without undue experimentation.

The rejection of claims 1-5, 8 and 9 under 35 U.S.C. 103 as being unpatentable over Liechty et al., Journal of Nutrition, is maintained. The replacement of the term "comprising" with the recitation "consisting essentially of" is noted; however, Applicants argue the concentration of many non-aromatic amino acids, specifically large neutral amino acids, would be "interfering substances." Such an assertion must be considered without merit since Applicants' invention is drawn solely to the administration of at least one aromatic amino acid, an isomer or analog thereof, to treat neurological disorders specifically involving glutamatergic synaptic transmission. It would have been reasonable to conclude the presence of other amino acids would have no effect on glutamatergic synaptic transmission.

The rejection of claims 1, 2, 8 and 9 under 35 U.S.C. 102(b), as being anticipated by Liechty et al., Journal of Nutrition, is maintained. See column one, page 1162, under Materials and Methods, where infusions of both L-phenylalanine and L-tyrosine are administered. Further, a priming dose was given as a bolus. As required by claim 9, both L-phenylalanine and L-tyrosine were admixed as a bolus.

The rejection of claims 1 and 8 under 35 U.S.C. 102(b), as being anticipated by The Merck Index, is maintained. Page 1253 discloses L-phenylalanine as a component of a known commercial product, an artificial sweeter, that is formulated with a carrier.
